EDUCATION

University of Technology Sydney (UTS)

Bachelor of Information Technology, Major in Artificial Intelligence

Ho Chi Minh City, Vietnam

September 2025 to October 2028

- Part of the first cohort of the UTS and HCMUT joint program taught in Ho Chi Minh City, selected through a competitive intake.
- GPA 3.21 / 4.0 (UTS GPA 5.63 / 7.0), weighted average mark 77.75 / 100, with 48 credit points completed so far.
- Earned High Distinctions in Business Requirements Modelling (96), Mathematics 2 (96) and Network Fundamentals (87) in the March 2026 session.

WORK EXPERIENCE

AI for Vietnam

Data Annotator

Ho Chi Minh City, Vietnam

August 2026 to Present

- Label text, image and video data by following the project guidelines, and flag unclear samples to the team so the training data for Vietnamese AI models stays accurate and consistent.

TECHNICAL PROJECTS

AMASE: Multi-Agent AI System for CV Evaluation

Personal Project

Python, LangChain, Claude & Gemini APIs, ChromaDB, SQLite | Repository: AMASE-AI

- Built a tool that reviews a CV in three steps: Gemini reads and breaks down the CV, Claude rewrites it in an ATS-friendly format, and Claude then estimates the chance of getting hired and explains why.
- Gave the agents a reference library of sample CVs in ChromaDB and a scraper that pulls real job requirements from LinkedIn, JobStreet and Seek.
- Saved each session in SQLite so a review can be paused and picked up later, and made it work with PDF, Word and text files.

Vietnam Youth Union Website

Organisation Project

React 19, Vite, Express 5, MySQL, Framer Motion | Repository: youth-union-site

- Built a five-page website for the union, including an event calendar, backed by an Express and MySQL API for adding, editing and removing events.
- Made it simple enough for members without a tech background to post news and events on their own, and protected the database against SQL injection.

AI COMPETITIONS & TEAM PROJECTS

Ho Chi Minh City University of Technology (HCMUT), VNU-HCM

January 2024 to Present

- **AI Challenge 2026:** Working on a system that searches large collections of videos and images and pulls out useful information.
- **CSE Summer School Hackathon:** Designed the database and the AI processing flow for my team's project, which won Third Prize.
- **Code Camp Competition:** Built AI agents to solve complex tasks, balancing accuracy against token cost and speed.
- **Bomberland AI Game:** Programmed and tuned game bots that make decisions in real time against other players' bots.
- Worked with teammates from different backgrounds, using Agile, Git and GitHub to plan work and review each other's code.

AWARDS & ACHIEVEMENTS

- Third Prize, CSE Summer School Hackathon 2025, HCMUT
- Consolation Prize, OISP Presentation Contest 2025, HCMUT
- Second Prize, Remote-Controlled Fire-Fighting Robot Design and Build Contest, 2023

SKILLS & INTERESTS

- **Programming Languages:** Python, Java, C++, JavaScript (ES6+), SQL
- **AI & Machine Learning:** LangChain, multi-agent systems, RAG (ChromaDB, FAISS, Sentence-Transformers), prompt engineering, Claude and Gemini APIs, Pydantic
- **Web Development:** React 19, Vite, Tailwind CSS v4, React Router, Framer Motion, Node.js, Express, REST API design, HTML/CSS
- **Databases & Tooling:** MySQL, PostgreSQL/Supabase, SQLite/SQLAlchemy, Git and GitHub, Vercel, ESLint/Oxlint, Microsoft Office
- **Languages:** Vietnamese (native), English (fluent in work settings)
- **Interests:** AI agents and applied machine learning, full-stack development, competitive programming
